Tidy data

“Tidy datasets are all alike but every messy dataset is messy in its own way” — Hadley Wickham

Tidy data

Three rules:

1. Each variable forms a column
2. Each observation forms a row
3. Each type of observational unit forms a table

Example: Contingency table

	survived	died
drug	15	3
placebo	4	12

not tidy

Example: Contingency table

	survived	died
drug	15	3
placebo	4	12

not tidy

tidy

treatment	outcome	count
drug	survived	15
drug	died	3
placebo	survived	4
placebo	died	12

Example: Contingency table

	survived	died
drug	15	3
placebo	4	12

not tidy

tidy

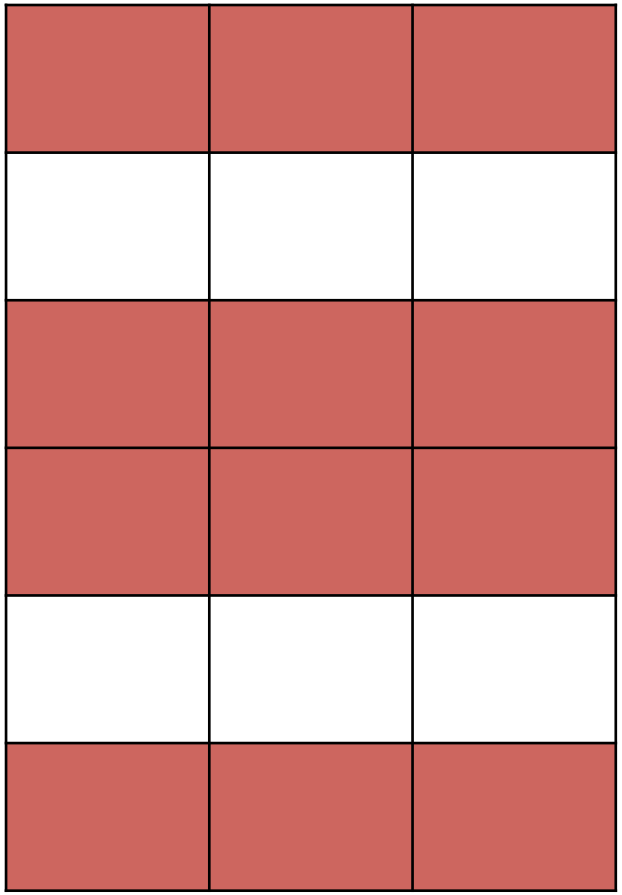
patient	treatment	outcome
1	drug	survived
2	drug	died
3	drug	survived
4	placebo	died
⋮	⋮	⋮

Working with tidy data in R: dplyr

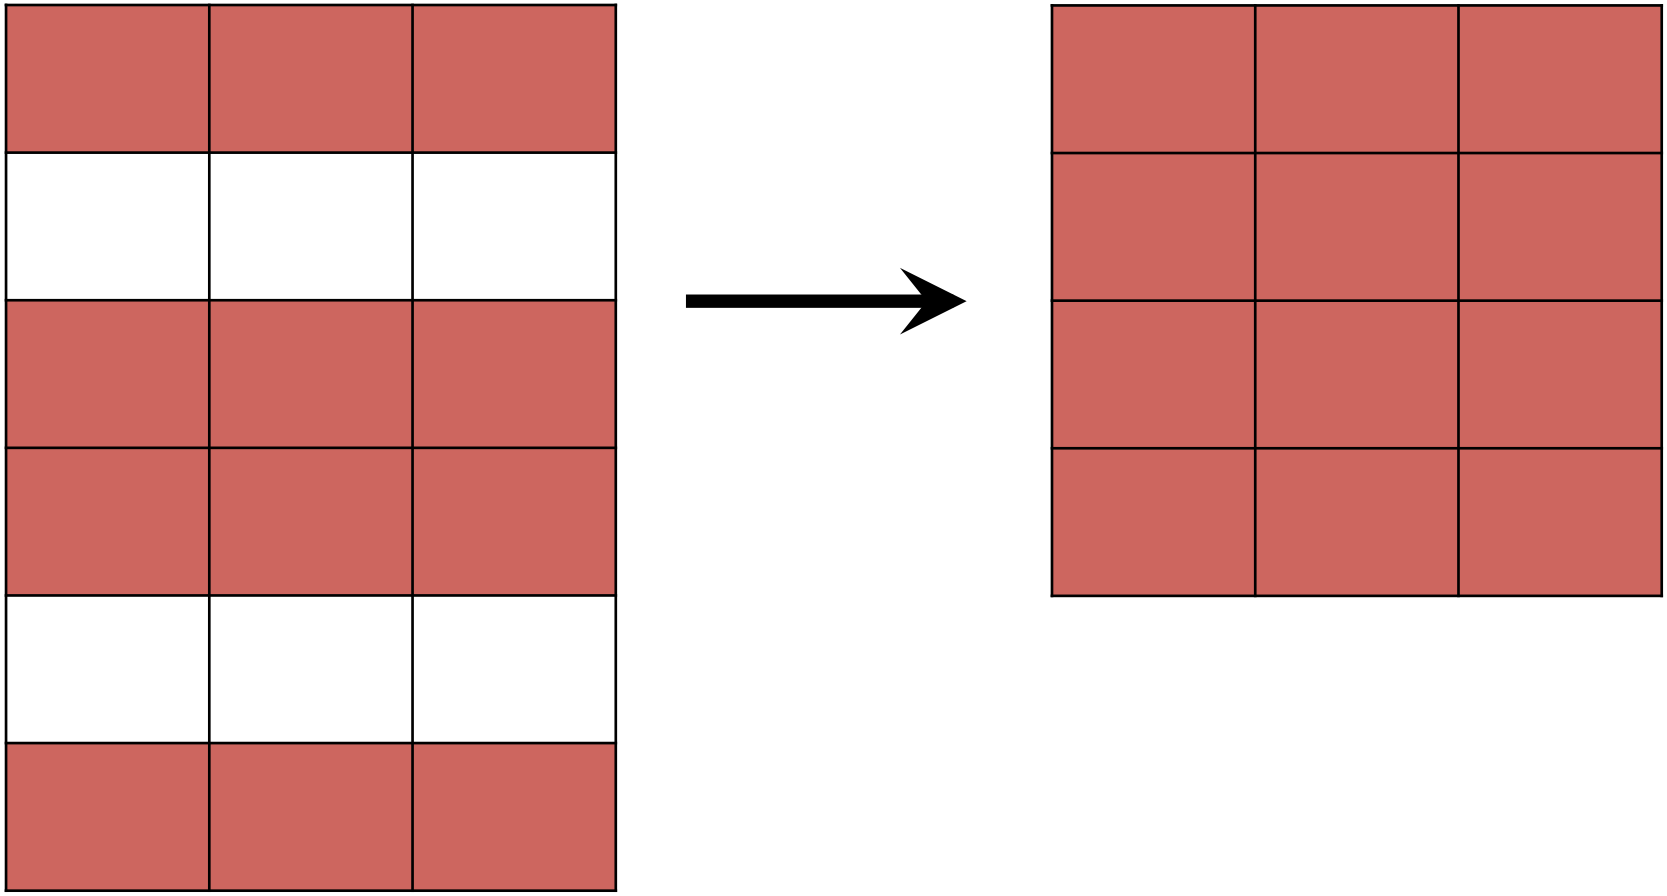
Fundamental actions on data tables:

- choose rows — `filter()`
- choose columns — `select()`
- make new columns — `mutate()`
- arrange rows — `arrange()`
- calculate summary statistics — `summarize()`
- work on groups of data — `group_by()`

`filter()`: pick rows



`filter()`: pick rows



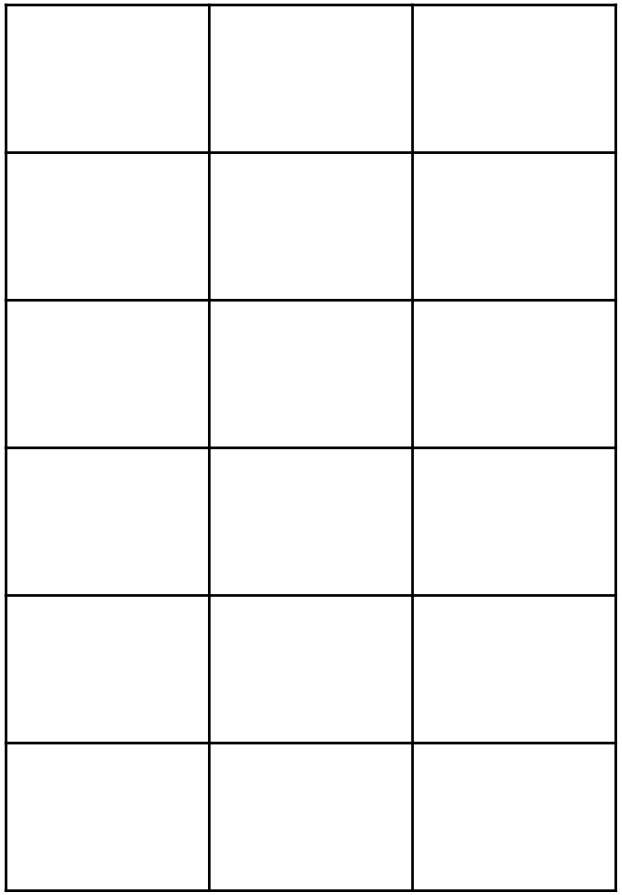
Choose rows with Sepal.Width > 4

```
> filter(iris, Sepal.Width>4)
```

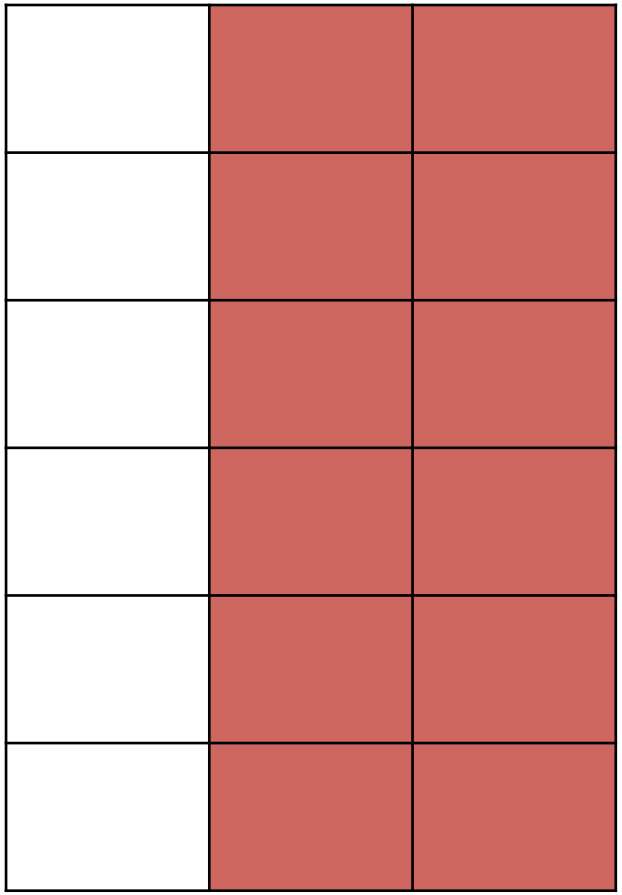
Choose rows with Sepal.Width > 4

```
> filter(iris, Sepal.Width>4)
  Sepal.Length Sepal.Width Petal.Length Petal.Width Species
1          5.7         4.4          1.5         0.4  setosa
2          5.2         4.1          1.5         0.1  setosa
3          5.5         4.2          1.4         0.2  setosa
```

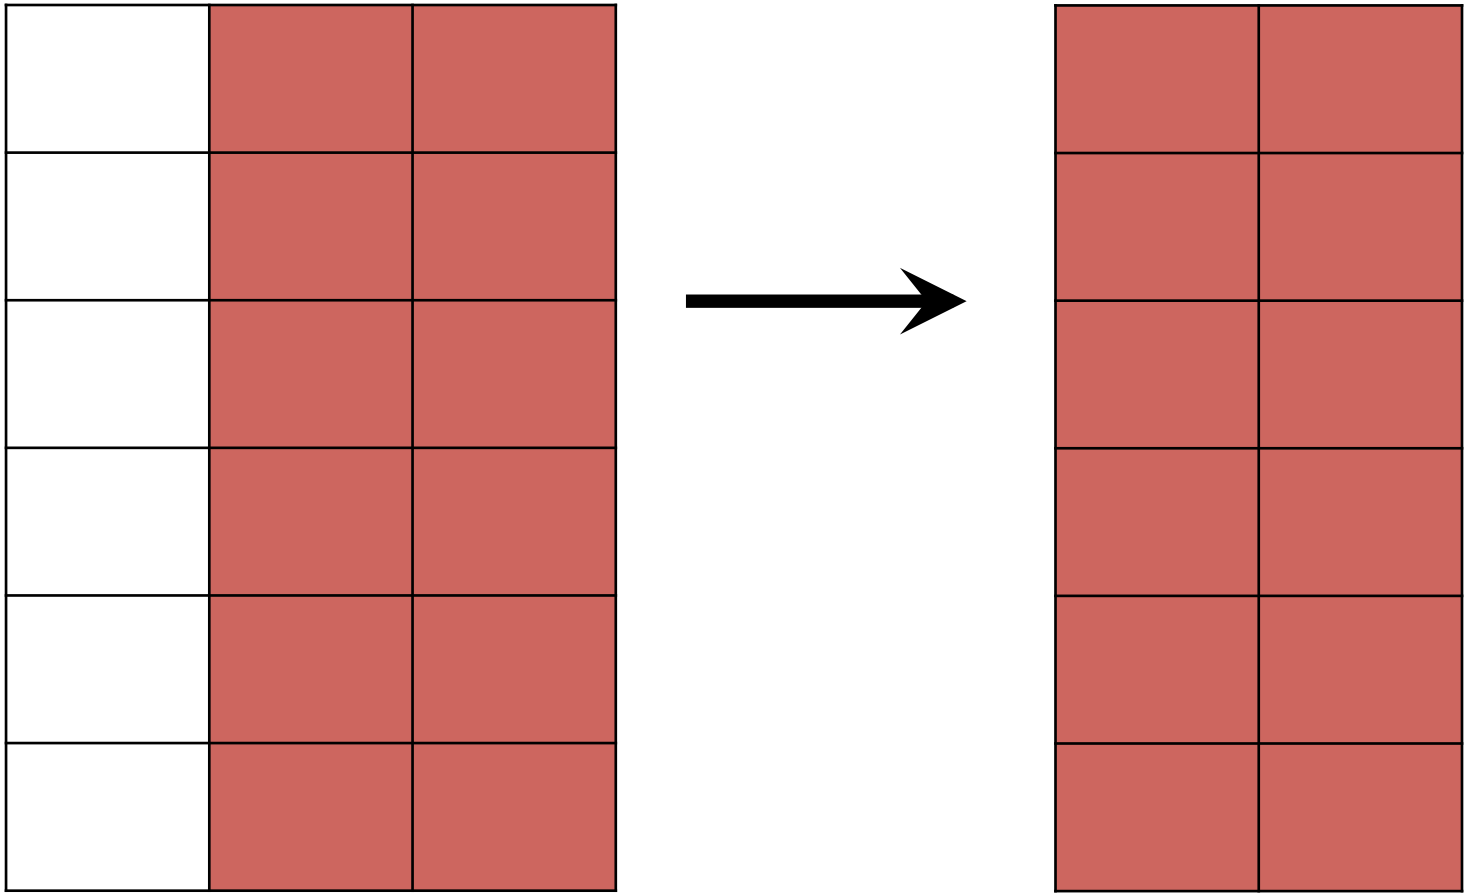
`select()`: pick columns



`select()`: pick columns



`select()`: pick columns



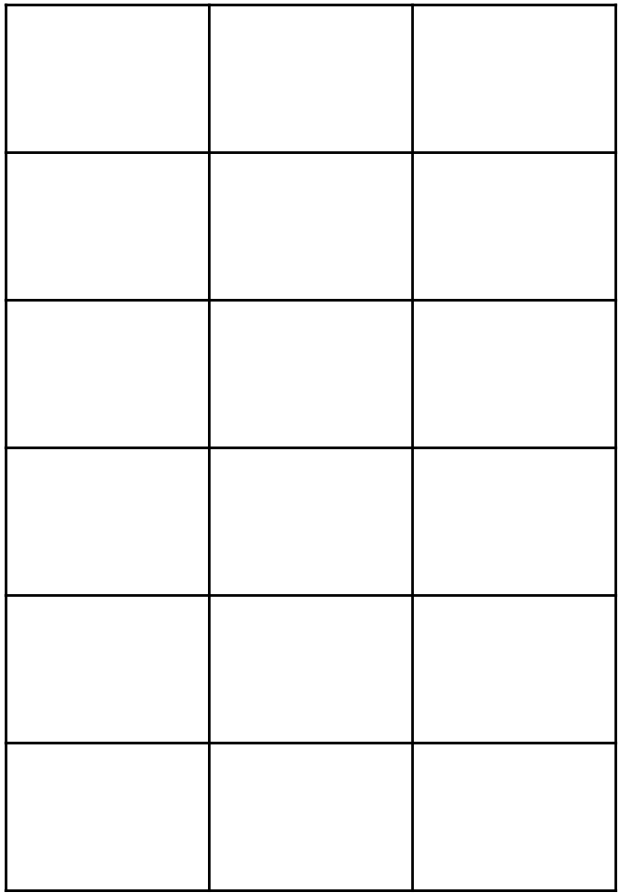
Choose the two columns Species and Sepal.Width

```
> select(iris, Species, Sepal.Width)
```

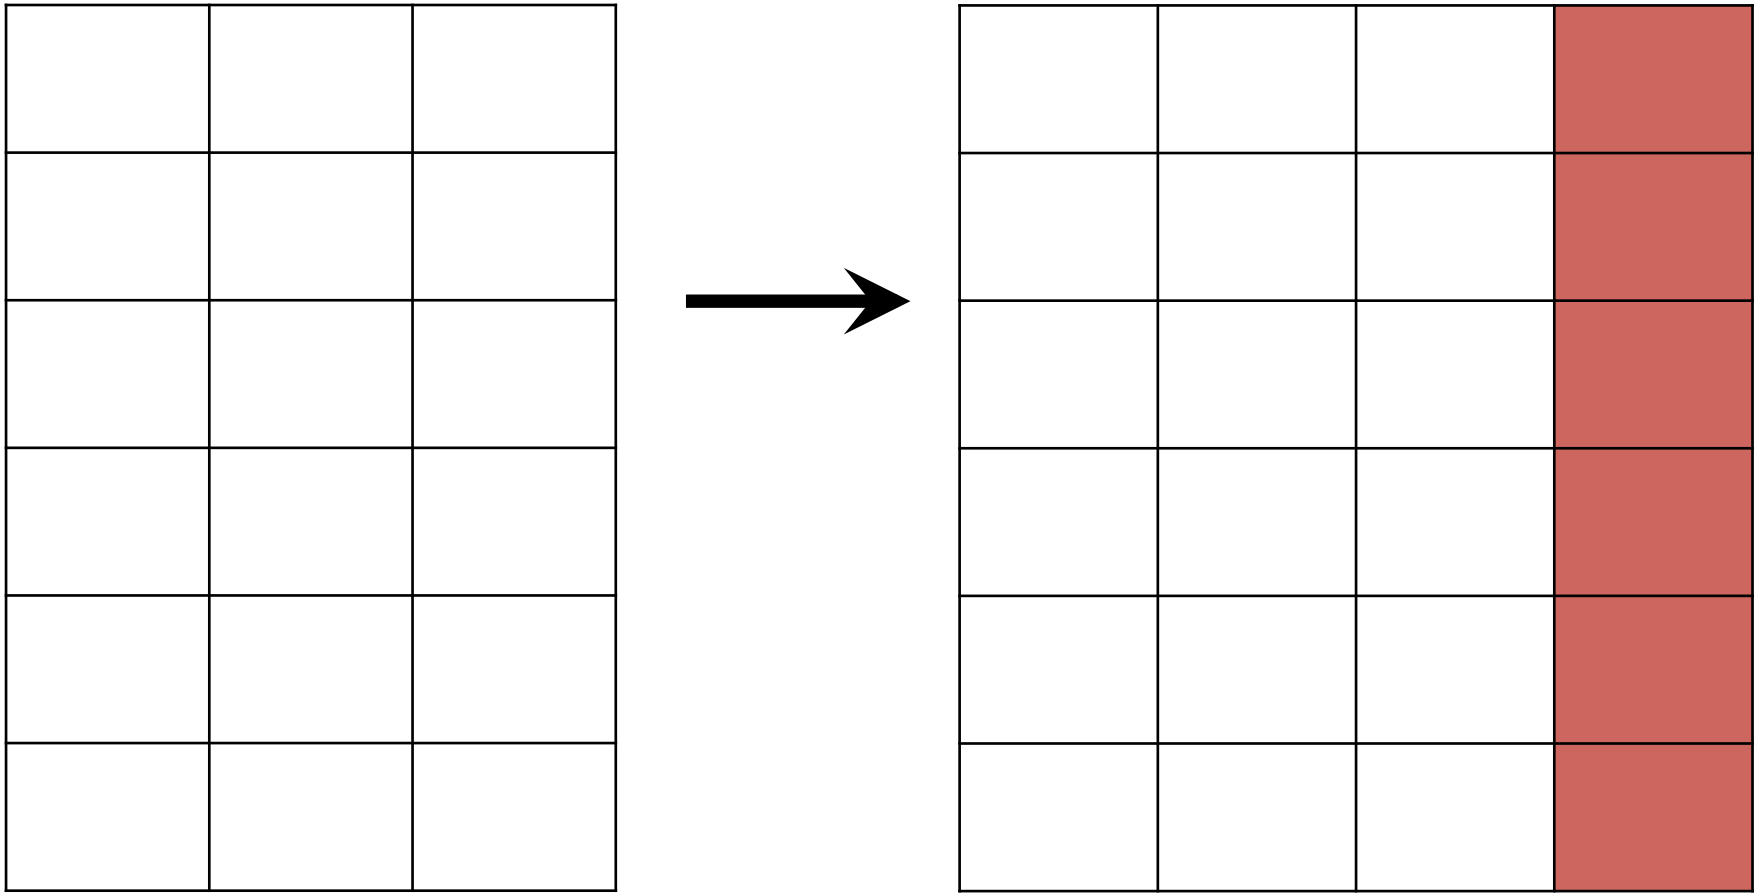
Choose the two columns Species and Sepal.Width

```
> select(iris, Species, Sepal.Width)
       Species Sepal.Width
1       setosa         3.5
2       setosa         3.0
3       setosa         3.2
4       setosa         3.1
5       setosa         3.6
6       setosa         3.9
7       setosa         3.4
8       setosa         3.4
9       setosa         2.9
10      setosa         3.1
11      setosa         3.7
12      setosa         3.4
13      setosa         3.0
14      setosa         3.0
```

`mutate()`: make new columns



`mutate()`: make new columns



Make new column with ratio of Sepal.Length to Sepal.Width

```
> mutate(iris, Sepal.Length.to.Width = Sepal.Length/Sepal.Width)
```

Make new column with ratio of Sepal.Length to Sepal.Width

```
> mutate(iris, Sepal.Length.to.Width = Sepal.Length/Sepal.Width)
    Sepal.Length Sepal.Width Petal.Length Petal.Width    Species Sepal.Length.to.Width
1            5.1         3.5          1.4         0.2     setosa               1.457143
2            4.9         3.0          1.4         0.2     setosa               1.633333
3            4.7         3.2          1.3         0.2     setosa               1.468750
4            4.6         3.1          1.5         0.2     setosa               1.483871
5            5.0         3.6          1.4         0.2     setosa               1.388889
6            5.4         3.9          1.7         0.4     setosa               1.384615
7            4.6         3.4          1.4         0.3     setosa               1.352941
8            5.0         3.4          1.5         0.2     setosa               1.470588
9            4.4         2.9          1.4         0.2     setosa               1.517241
10           4.9         3.1          1.5         0.1     setosa               1.580645
11           5.4         3.7          1.5         0.2     setosa               1.459459
12           4.8         3.4          1.6         0.2     setosa               1.411765
13           4.8         3.0          1.4         0.1     setosa               1.600000
14           4.3         3.0          1.1         0.1     setosa               1.433333
15           5.8         4.0          1.2         0.2     setosa               1.450000
16           5.7         4.4          1.5         0.4     setosa               1.295455
17           5.4         3.9          1.3         0.4     setosa               1.384615

```

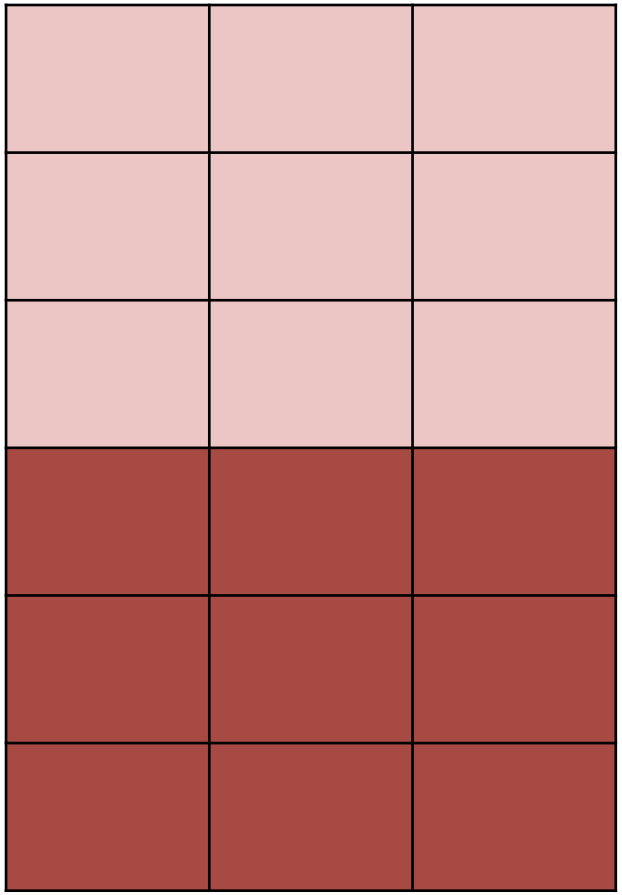
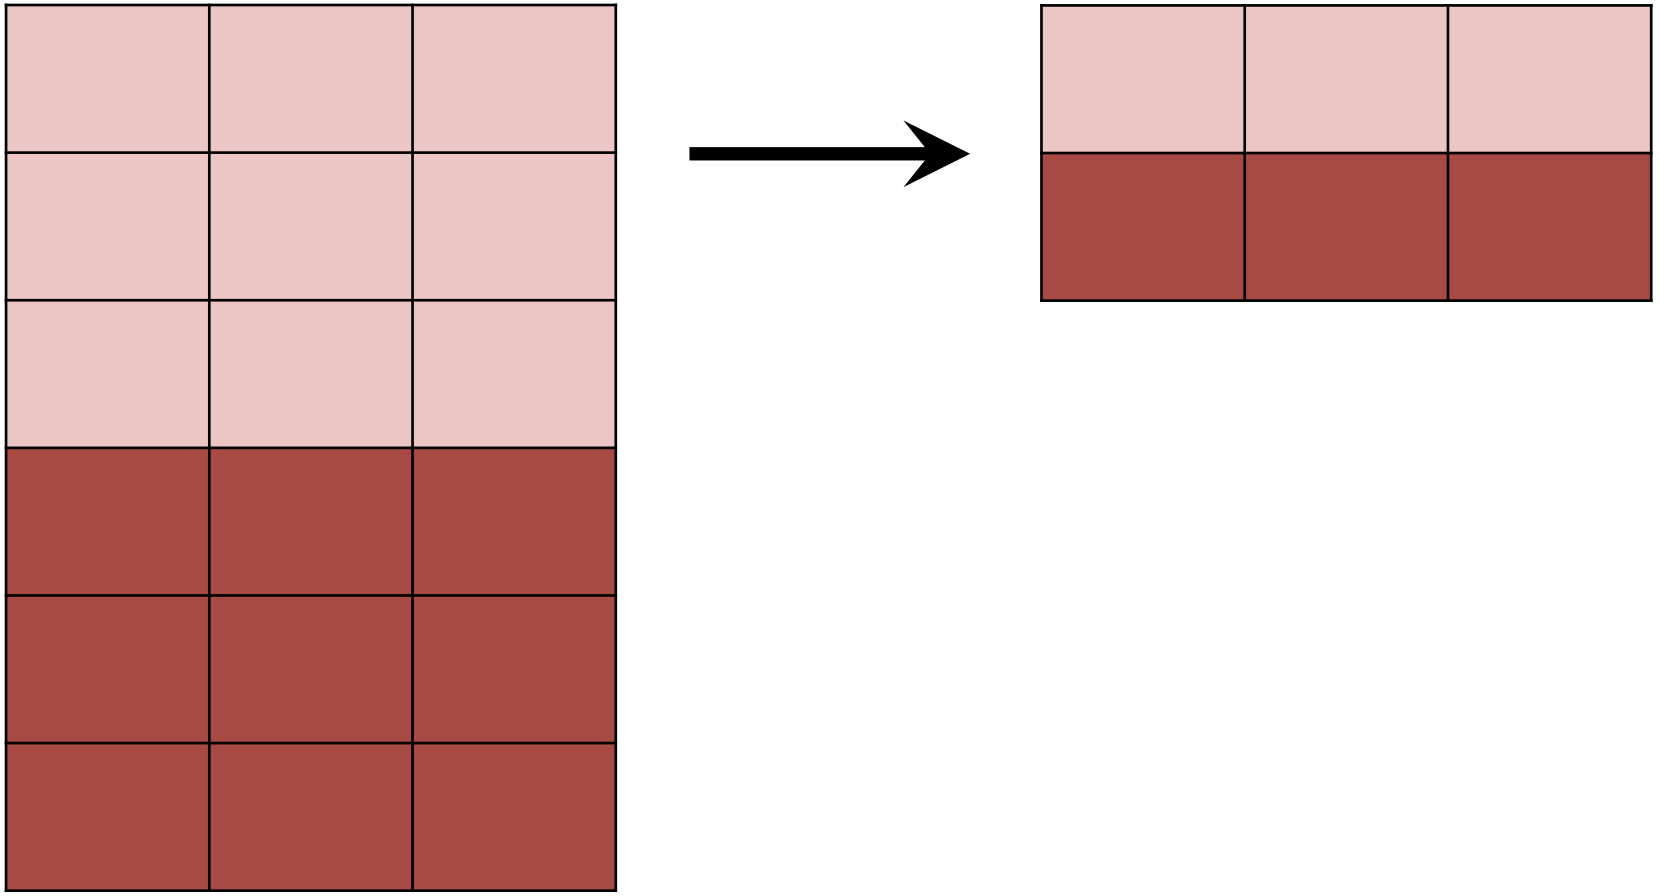
`summarize()`: collapse multiple rows



`summarize()`: collapse multiple rows



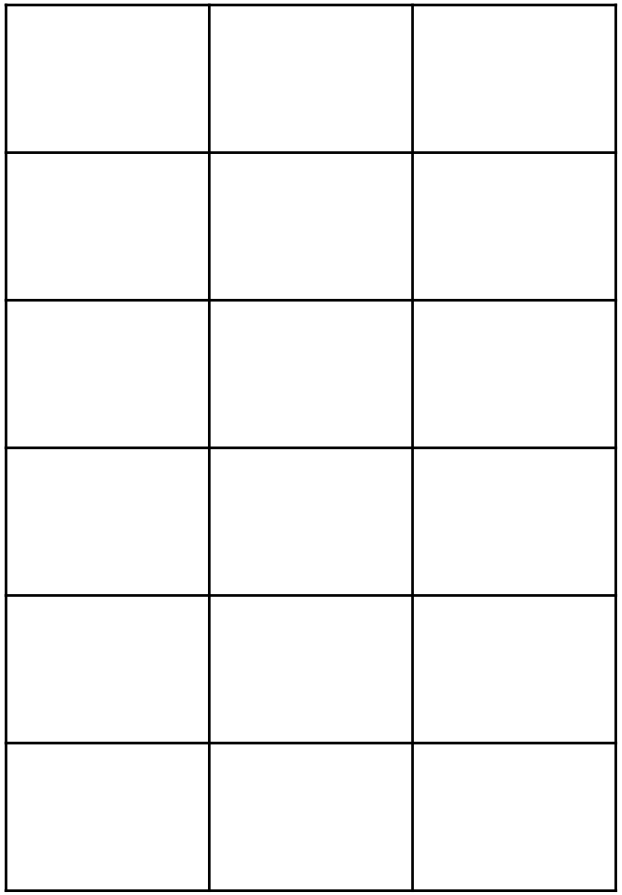
Calculate mean and standard deviation of Sepal.Length

```
> summarize(iris, mean.sepal.length = mean(Sepal.Length),
                  sd.sepal.length   = sd(Sepal.Length))
```

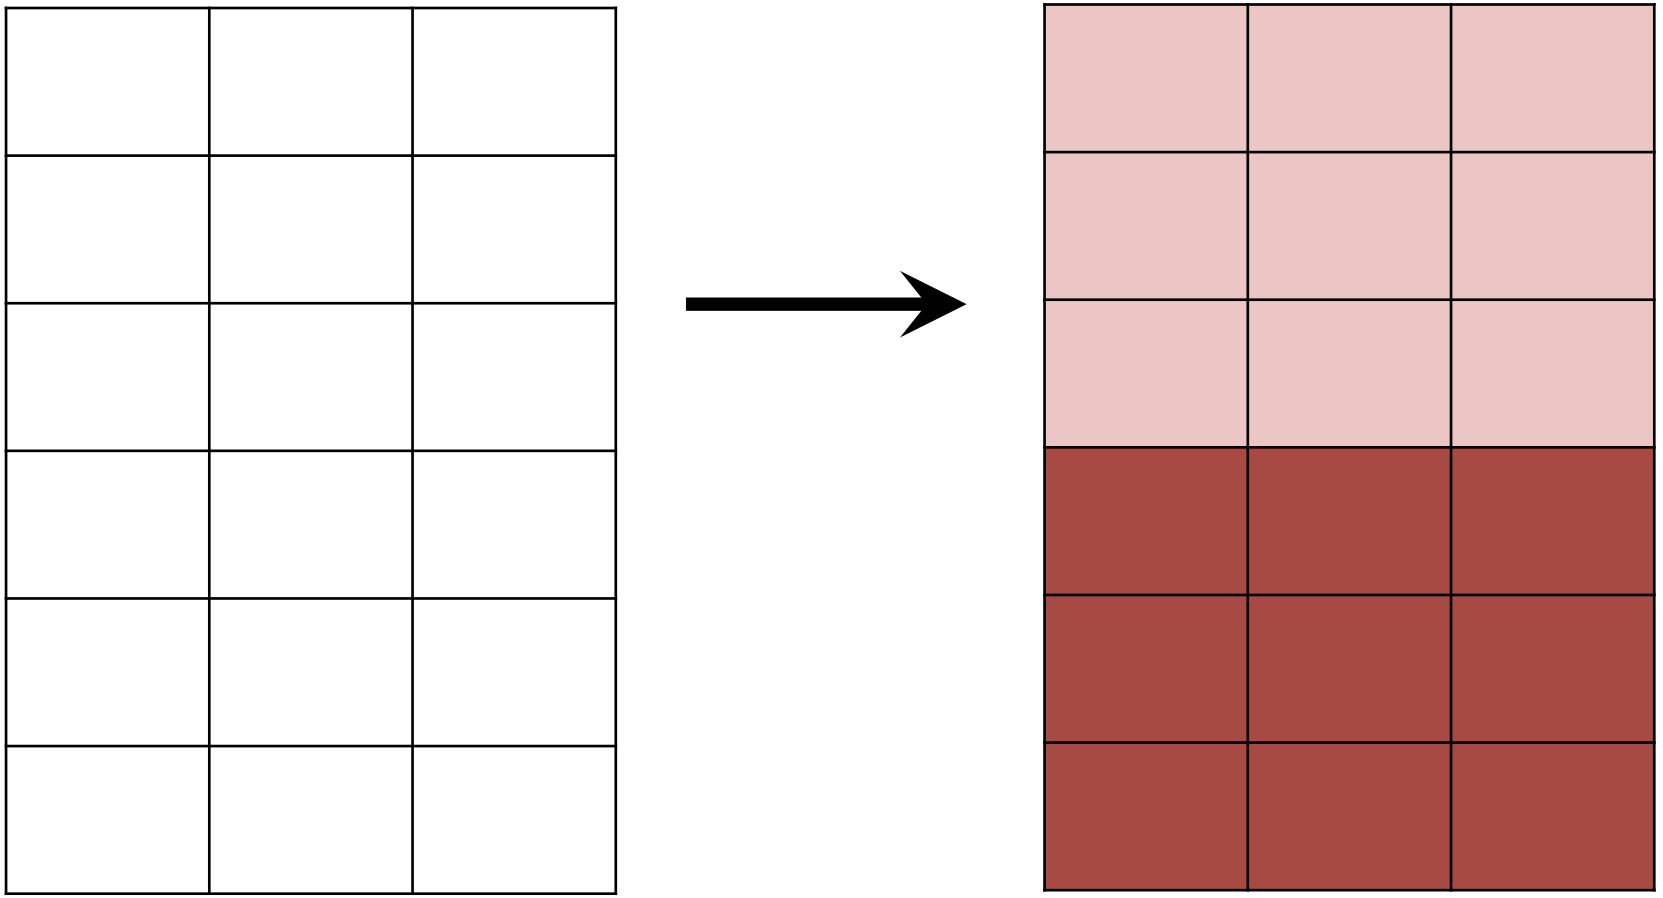
Calculate mean and standard deviation of Sepal.Length

```
> summarize(iris, mean.sepal.length = mean(Sepal.Length),
                  sd.sepal.length   = sd(Sepal.Length))
  mean.sepal.length sd.sepal.length
1          5.843333       0.8280661
```

`group_by()`: set up groupings



`group_by()`: set up groupings



Calculate mean and standard deviation of Sepal.Length, grouped by Species

```
> summarize(group_by(iris, Species),
                    mean.sepal.length = mean(Sepal.Length),
                    sd.sepal.length   = sd(Sepal.Length))
```

Calculate mean and standard deviation of Sepal.Length, grouped by Species

```
> summarize(group_by(iris, Species),
                  mean.sepal.length = mean(Sepal.Length),
                  sd.sepal.length   = sd(Sepal.Length))
Source: local data frame [3 x 3]
